Change Notification: Handle & Drill Adaptor Bit

Updated: 13th August 2015

Change Description

On all new DataSign-VMS and DataSign-PTL products, the Stabiliser Leg (Wind-Down-Leg) will not include a handle. Instead a separate handle and custom drill adaptor bit will be provided with every new DataSign-VMS and DataSign-PTL sold.

Benefits

The change has come about to allow for:

- **Efficient Setup**

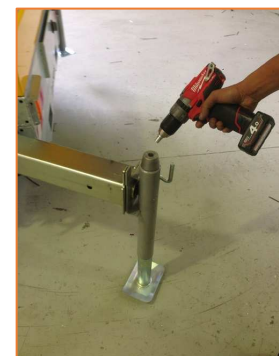

Using the drill bit in a high-powered drill allows for quick deployment of the four Stabiliser Legs on each Sign and the Manual-STR (if fitted). Easily halves the product setup time!

Note: Data Signs uses the Milwaukee Drill but any powerful cordless drill will be adequate.

- **Additional Security**

Wind the four Stabiliser Legs such that the trailer wheels are not touching the ground. This adds stability and makes it extremely difficult for the Stabiliser Legs to be moved providing great security benefits without the need for additional locks on each leg.

Additional Handles and Drill Adaptor Bits can be obtained from Data Signs.
